

User Acceptance Testing (UAT) Template

Date	16 June 2025
Team ID	LTVIP2025TMID34308
Project Name	Grain Palette –A Deep Learning Odyssey in Rice Type Classification Through Transfer Learning
Maximum Marks	10M

Project Overview:

Project Name: Grain Palette –A Deep Learning Odyssey in Rice Type Classification

Through Transfer Learning

Project Description:

Grain Palette is an intelligent grain classification system that uses deep learning to identify rice grain types from images. It supports image input through file upload or real-time camera capture and uses a trained Convolutional Neural Network (CNN) model to classify five major rice varieties: Arborio, Basmati, Ipsala, Jasmine, and Karacadag. The application is built for mobile, desktop, and web platforms, ensuring accessibility and scalability across diverse user bases.

Project Version: 1.0.0

Testing Period: 16th May 2025 to 16th June 2025

Testing Scope: Tried and used by many farmers and market product sellers.

Testing Environment: It is tested through the local server in the laptop

URL/Location: <https://github.com/Bvk277353/Smart-internz-project-grain-palette--rice-type-classifier-.git>

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Took a real time photo of a paddy crop	Step-1: Uploaded the image from device by clicking on upload button Step 2: Click on the classify button	Classified rice name along with uploaded image with 100% accuracy	Classified rice name along with uploaded image with 99% accuracy	Pass

		Step-3: you will be given with the name of classified rice along with some cultivation tips			
TC-002	Gave wrong input	Uploaded input image as wheat	Should print error	It has classified wheat into its nearest matched rice grain with 60% accuracy	Fail

Bug Tracking:

No bugs detected or reported till now

Sign-off:

Tester Name: vardhan

Date: 16th June 2025

Notes:

- Ensure that all test cases cover both positive and negative scenarios.
- Encourage testers to provide detailed feedback, including any suggestions for improvement.
- Bug tracking should include details such as severity, status, and steps to reproduce.
- Obtain sign-off from both the project manager and product owner before proceeding with deployment.
